

Floating Colours

Sensory Bottle

You will need:

Small (1cm) plastic cubes (lots of colours)

Plastic container with a lid

Liquid glycerine

Water

Strong glue or tape

Method

1. Fill the container nearly full with water.
2. Add the plastic cubes to the container.
3. Add 3-4 large drops of glycerine. (This will help the cubes to move around slowly.)
4. Secure the lid onto the container and fix it tightly with strong glue or tape.
5. As the container is tipped upside down, enjoy watching the coloured cubes move around in different ways.
